Services

Certification and referencing

Sames is certified as a training centre by the DIRRECTE of the Auvergne Rhône Alpes region under the number 84 38 06768 38.

Throughout the year, our company provides training courses that enable you to acquire the know-how required for the implementation and maintenance of your equipment in order to guarantee its long-term performance.

A catalogue is available on request.

www.sames.com/usa/en/services-training.html

Line audit

As part of a technical assistance programme for our customers using **Sames** equipment, line audits are designed to help you optimise and control your production tool.

Our network of experts is continuously trained and qualified to provide our customers with technical expertise on the liquid or powder installations in which our equipment is integrated. The overall environment of the production lines is taken into account during this technical audit.

A brochure is available for download:

www.sames.com/usa/en/services-service-contract.html

Maintenance contract

An annual maintenance contract (including or not the consumables to be replaced during each intervention) can be considered with the partnership of **Sames**. It is associated with a preventive maintenance plan established during a first audit visit which details the control points necessary to guarantee the performance of the installed equipment.

1. Health and safety instructions

1.1. Configuration of the certified equipment

This manual defines the configuration of the certified equipment.

1.2. Marking

1.2.1. Description of the ATEX equipment

Each device is marked with the name of the manufacturer, the device reference and important informations for the use of the device: air pressure, electrical power.

This equipment has been designed in accordance with the ATEX Directive 2014/34/EU and is intended for use in Zone 1.

This equipment therefore complies with the following provisions:

- ATEX Directive (2014/34/EU):  II 2 G - group II, category 2, gas).

The EU declaration of conformity and the UKCA declaration (specific for the British market) are included in this document in annexes.

Description	
Sigle Sames	Manufacturer's brand
Xcite®+ Xcite®+ Light	Product name
CE	CE: European conformity
Ex II 2 G	Ex : Use in explosive area II: Group II 2: Category 2 Surface equipment intended for use in environment where explosive atmospheres due to gases, vapors, mists are likely to occur occasionally during normal operation. G: Gas
Ex	Ex: Marking of conformity to european standards
h	h: Protection mode for non-electrical devices
IIB T6	IIB: Reference gas for equipment qualification T6: Temperature class - Maximum surface temperature: 85°C / 185°F*
Gb	Gb: Equipment protection level (gas Zone 1)
X	X: Special conditions apply to the use of the safe operation. Refer to the instructions in the instruction manuals that accompany this product.
UK CA	UK CA: UK Conformity Assesment Marking required for certain products placed on the market in Great Britain (England, Wales, Scotland) on January 2021
P air 6 bar/87 psi	Gun air supply maximum pressure
2022	This number indicates the year of manufacture.

Each appliance is fitted with a nameplate bearing the name of the manufacturer, the appliance reference number, important information for the use of the appliance (pressure, power,...) and sometimes the pictogram shown opposite.

The equipment is designed and manufactured with high quality materials and components that can be recycled and reused.

The 2012/19/EU European Directive applies to all devices marked with this logo (crossed-out waste bin). Find out more about the collection systems available for electrical and electronic appliances.

Follow the rules in your locality and **do not dispose of your old appliances with your household waste**. Proper disposal of this old appliance will help prevent negative effects on the environment and human health.

1.2.2. Standards and guidelines applied

The standards applied are as follows:

- **EN ISO 80079-36 Juin 2016 / EN ISO 80079-36 June 2016:**
Non-electrical equipment for use in potentially explosive atmospheres - Methodology and requirements - Explosive atmospheres - Part 36: non electrical equipment for use in potentially explosive atmospheres - Methodology and requirements.
- **EN ISO 80079-37 Juin 2016 / EN ISO 80079-37 June 2016:**
Explosive atmospheres - Part 37: non-electrical equipment for use in potentially explosive atmospheres - Non-electrical protection by constructional safety 'c', by ignition source monitoring 'b', by immersion in liquid 'k' - Explosive atmospheres - Part 37: non-electrical equipment for use in potentially explosive atmospheres - Non-electrical protection mode by constructional safety 'ch', by ignition source monitoring 'bh', by immersion in liquid 'kh'.
- **EN 1127 Août 2019 / EN 1127 August 2019:**
Explosive atmospheres - Explosion prevention and protection - Part 1: basic concepts and methodology.

The guidelines applied are as follows:

- **Directive ATEX 2014/34/UE / ATEX Directive 3014/34/EU:**
Equipment and protective systems intended for use in explosive atmospheres.
- **SI 2016 No. 1107:**
Equipment and Protective Systems Intended for use in Potentially Explosive Atmospheres Regulations 2016.

1.3. Meaning of the pictograms

 <p>Danger: Electricity</p>	 <p>Danger: Automatic start</p>	 <p>Danger: Hot parts or surfaces</p>	 <p>Danger: Risk of explosion</p>	 <p>Danger: General</p>
 <p>Danger: High pressure</p>	 <p>Danger: Pinching and/or crushing</p>	 <p>Danger: Atex Zone</p>	 <p>Danger: Flammability hazard</p>	 <p>Danger: Corrosive products</p>
 <p>Danger: Toxic materials</p>	 <p>Danger: Harmful products</p>	 <p>Prohibition of wearing a pacemaker</p>	 <p>Obligation: Wear of hearing protection</p>	 <p>Obligation: Wear of a protective visor</p>
 <p>Obligation: Protection of the respiratory tract</p>	 <p>Obligation: Wear of safety shoes</p>	 <p>Obligation: Wear of protective clothes</p>	 <p>Obligation: Wear of gloves</p>	 <p>Obligation: Wear of a protective helmet</p>
 <p>Obligation: Wear of safety glasses</p>	 <p>Obligation: General</p>	 <p>Obligation: Grounding</p>	 <p>Obligation Refer to the manual</p>	

1.4. Precautions for use

1.4.1. General

The equipment at your disposal is for professional use only. It must be used only for the purpose for which it was intended or designed.

Read all operating instructions and labels carefully before operating the equipment.

Personnel using this equipment must have been trained in its use.

The workshop manager must ensure that the operators have fully understood all the instructions and safety rules of this equipment and other elements and accessories of the installation.

Misuse or improper operation can cause serious injury.

Do not modify or transform the equipment. Parts and accessories must only be supplied or approved exclusively by **Sames**.

The equipment must be checked periodically. Defective or worn parts must be replaced.

Never exceed the maximum working pressures of the equipment components.

Always respect the laws in force regarding security, fire, electricity of the destination country of the equipment.

Only use products or solvents that are compatible with the parts in contact with the material (see material manufacturer's data sheet).

1.4.2. Safety devices

ATTENTION

Safety devices are set up for safe use of the equipment.

The manufacturer cannot be held responsible for any bodily injury as well as failures and / or damage to the equipment resulting from the destruction, hiding or total or partial removal of the safety devices.

1.4.3. Pressure hazards

Safety requires that a **pressure relief-air** shut-off valve must be installed in the pump motor supply system to release trapped air when the supply is shut off.

Without that precaution, residual air from the motor may cause the pump to operate and cause a serious injury.

Also, a **fluid drain valve** must be installed on the fluid system so that it can be drained (after shutting off motor air and decompressing it) before any operation on the equipment. These valves must remain closed for the air and opened for the fluid during the intervention.

1.4.4. Fire, explosion, static electricity hazards

Incorrect earthing, insufficient ventilation, flames or sparks can cause an explosion or fire which can lead to serious injury.

To avoid these risks, especially when using the pumps, it is imperative to:

- connect the equipment, the parts to be treated, the product and cleaning agent canisters to the ground,
 - to ensure a good ventilation,
 - keep the work area clean and free of rags, paper, solvents,
 - do not operate electrical switches in the presence of vapors or during application,
 - stop application immediately in the presence of electrical arcs,
 - to store all liquids outside of the work areas,
 - use products with the highest possible flash point to avoid any risk of formation of flammable gases and vapors (consult the safety data sheets of the products),
 - equip drums with a lid to reduce the diffusion of gases and vapors in the cabin,
 - the use of explosive products or gases is forbidden.
- during assembly and disassembly, transport to and from the site of use and maintenance, there is a risk of sparking due to friction, blows and friction or due to electrostatic charging. Therefore, make sure that these risks are eliminated during these work sequences or that you work in a non-explosive atmosphere.
- regularly clean the surface of the gun body and remove any dust or paint layers.

1.4.5. Toxic chemicals hazards

Toxic materials or vapors can cause serious injury through contact with the body, in the eyes, under the skin, but also by ingestion or inhalation. It is imperative:

- to know the type of material used and the dangers it represents,
- to store the materials to be used in appropriate areas,
- to contain the material used during the application in a container designed for this purpose,
- to dispose the materials in accordance with the legislation of the country where the equipment is used,
- to wear clothing and protection designed for this purpose,
- to wear goggles, hearing, gloves, shoes, coveralls and respiratory masks.

ATTENTION: The use of halogenated hydrocarbon solvents and products containing such solvents in the presence of aluminium or zinc is prohibited.

Failure to follow these instructions could result in an explosion hazard causing serious injury or death.

1.4.6. Hoses

Recommendations for hoses:

- Keep hoses away from traffic areas, moving parts and hot areas.
- Never subject the product hoses to temperatures above 60°C / 140°F or below 0°C / 32°F.
- Do not use the hoses to pull or move the equipments.
- Tighten all connections as well as the hoses and connectors before putting the equipment into operation.
- Check the hoses regularly and replace them if damaged.
- Never exceed the Maximum Working Pressure (MWP) stated on the hoses.
- For the assembly of the hoses and the gun: the wearing of PPE is mandatory.
- Tighten to the stop (Hoses and Gun).

1.4.7. Normal stop

To perform a normal stop:

- Use the air regulator to gradually depressurize the pump.

1.4.8. Materials used

Given the diversity of the materials implemented by the users and the impossibility of listing all the characteristics of chemical substances, their interactions and their evolution over time, **Sames** cannot be held responsible:

- Poor compatibility of the materials in contact,
- Inherent risks to personnel and the environment,
- Wear and tear, malfunctions, material or equipment malfunctions as well as the quality of the finished product.

The user shall identify and prevent from potential dangers inherent to the materials used, such as:

- Toxic vapors,
- Fires,
- Explosions.

It will determine the risks of immediate or repeated exposure reactions on personnel.

With respect to the materials and paints (liquid or powder) used with its equipment, **Sames** declines any responsibility, in case of:

- Physical or psychological injuries,
- Direct or indirect material damage due to the use of chemical substances.

1.5. Warnings

It is imperative that anyone with a pacemaker not use the equipment or enter the projection area.

Indeed, high voltage can cause the pacemaker to malfunction.

This equipment may be dangerous if not used, disassembled and reassembled in accordance with the rules specified in this manual and any applicable European Standard or national safety regulations.

The proper operating of the equipment is guaranteed only with the use of original spare parts distributed by Sames.

In order to ensure optimum assembly, spare parts should be stored at a temperature close to their operating temperature. If not, a sufficient waiting time must be observed before installation, so that all parts are assembled at the same temperature.

1.5.1. Installation rules

Environment

Environmental risks must be controlled in the following manner:

- Have a qualified electrician check for ground continuity. If ground continuity is not assured, check the terminal, wire and grounding point. Never operate the equipment without resolving this problem.
- Using a conductive air hose (minimum internal Ø 6.5 mm), connect the gun to the air supply through a 0-6 bar/ 0-87 psi air regulator.
- The materials to be painted must also be 'grounded' by means of clamps with cables or, if they are suspended, by means of hooks that must remain clean at all times.
- Respect the average temperature of use of the equipment and products, which must be at least 5°C / 41°F below the flash point of the products and within a range of 0 to 40°C / 32° to 104°F.
- Ventilation of the area by forced extraction and supply of unpolluted air shall be mandatory during equipment use of cleaning operations.
- Fragile parts of the installation, and in particular the flexible hoses, must be protected from mechanical or thermal damage during production or maintenance.
- The waste related to the operations or the dismantling of the equipment will have to be treated according to the laws in force.
- The noise level of our equipment is limited to the maximum.
- However, the operators will have to be protected according to the global noise level of the environment.
- Depending on the operating conditions, the sound pressure of the equipment may cause hearing damage.
- Take appropriate measures to reduce noise pollution.
- Dispose of packaging materials in an environmentally friendly manner.

ATTENTION

Danger to personnel if improperly installed.

- The exact delimitation of the zones is the express responsibility of the user, depending on the products used, the environment of the equipment and the condition of use.
- Select the pump so that the fluid pressure delivered by the pump is appropriate for the type of gun selected.
- By means of an high pressure hose, connect the paint fitting on the gun to the pump. Tighten the fittings. firmly.
- The pressure resistance of the hose must be greater than or equal to the pressure delivered by the pump.
- In some special cases, if the air hose is non-conductive, the material hose must be conductive.
- It is imperative that one of the 2 hoses (air or material) of the gun is conductive.

1.6. Important recommendations

1.6.1. Non-intended use or foreseeable misuse

Any use other than the use described in the paragraph, 'Intended use' and in this operating manual, and any use that extends beyond the specified intended use, shall apply as non-intended use. The manufacturer shall not be liable damage resulting from non-intended use. This risk is borne solely by the user.

The following points describe improper or prohibited use:

- Conveyance of fluids that does not meet the product specification.
- Modify or alter the gun, in any way.
- Use a damaged gun.
- Use, maintenance, repair of the installation or commissioning of the gun by unauthorized, untrained personnel or by a private user.
- Use the gun without grounding,
- Use the gun outside the indicated parameters / service data.
- Use the gun in a place where there is a risk of ignition due to ignition sources in the vicinity of the gun.
- Failure to observe the maintenance intervals.
- Immerse the gun in solvents or aggressive products.
- Use the gun in Zone 0 gas or dust explosion hazard areas or use it in explosion hazard areas without the operator first implementing measures that comply with the requirements of Directive 2014/34/EU and current national explosion protection regulations.
- First start-up without prior inspection of the area and the gun by an authorized person.
- Use of products that are chemically incompatible with the materials used in the construction of the gun: the operator of the gun must check the chemical compatibility of the products conveyed.
- Use of products whose characteristics (e.g. ignition temperature) are not compatible with the gun identification.
- Bypassing safety devices of the gun.

**ATTENTION: Never wipe the end of the tip with the fingers.
Do not point the spraying gun at people or animals.
Always use the safety trigger lock when leaving the gun unattended.
Danger to personnel – Risk of product injection.**

1.6.2. Compressed air quality

Not applicable

1.6.3. Transport

The gun should only be transported in its original packaging to avoid transport damage.

1.6.4. Check the scope of delivery

- Remove the gun from its packaging.
- Dispose the packaging properly. Comply with the rules in force in your locality.
- Check that the gun has not been damaged during transport.
- Transport damage must be immediately communicated to the transport company and **Sames** in writing.
- Protect the gun from further damage.
- Use the packing slip to verify the completeness of the delivery.

1.6.5. Recommendation materials

- Our equipment must not be modified or used for purposes not intended. Any modification of the equipment made by the user and not authorized by **Sames** will result in loss of certification.
- Parts and accessories must be supplied or approved exclusively by **Sames**.

1.6.6. Storage conditions

Our equipment must be stored in its original packaging.

In the event of prolonged storage, it is advisable to carry out a preventive maintenance on all lubricants before commissioning.

Storage before installation:

- We recommend a storage temperature between +0°C / +32°F and +50°C / +122°F.
- Protect the unit from dust, water runoff, moisture, vibration and shock.
- Remove the packaging just before assembly.

Storage after installation:

- Protect the unit from dust, water runoff, moisture, vibration and shock.

1.6.7. Handling

Not applicable

1.7. Warranty

Sames grants a contractual warranty for a period of twelve (12) months from the date of availability to the customer provided that the conditions of use indicated in this technical manual are complied with.

In order to be implemented, the warranty claim must define precisely, in writing the malfunction in question, must be accompanied by the defective material and/or component and must include the conditions under which the customer acquired the material from **Sames**.

Sames will only accept or refuse the implementation of the warranty after analysis of the 'defective' material. The warranty granted by **Sames** is limited to the replacement of the material in its entirety or to the partial replacement of the defective component.

Sames will only bear the cost of the parts necessary to replace the defective material.

No warranty will be granted by **Sames**:

- For defects and deteriorations resulting from abnormal conditions of storage and/or conservation of the customer's premises or for maintenance or use of the equipment not conforming to the rules of art or not respecting the prescriptions of the present technical manual given to the customer by **Sames**,
- For defects and damage resulting from replacement parts not approved by **Sames** or which have been modified by the customer or in the event that the replacement of a component of the equipment by the customer would damage other elements.
- If the equipment is dismantled without prior agreement from the supplier's technical support,
- For all damages resulting from negligence or lack of supervision on behalf of the customer,
- In the event of normal wear and tear of the equipment and/or its components or in the event of deterioration or accident resulting from faulty and/or abnormal use thereof.

2. Description

2.1. General

Xcite®+ and Xcite®+ Light guns have an Airmix® finish:

- High transfer rate: up 86%,
- Designed to access hard-to reach areas.

Airmix® spray technology is the best compromise between productivity and finish quality for minimal product loss.

Xcite®+ and Xcite®+ Light guns are designed to spray:

- Varnishes,
- Lacquers,
- Shades,
- Solvent or water soluble materials,
- High dry extract,
- Polyurethanes,
- Two components.

Expected use

Airmix® spray technology is the best compromise between productivity and finish quality for minimal product loss.

- Simple design: easy to use and maintain.

Performance

- Large tip selection with dedicated X-tra Fine Finish tips for water-based material with wide choice of flow rates and fan width patterns.
- Job repeatability with our selection of tips that are individually tested to guarantee a consistent pattern.
- Unsurpassed finishing quality and outstanding transfer efficiency with VX24 HVLP aircap.
- Built-in filter with high filtration capacity to avoid tip blockage and minimize pressure loss.
- Diffuser and deflector embedded to decrease the atomizing air consumption and improve atomization.

Productivity

- Easy adjust aircap to facilitate the rotation of the head from horizontal to vertical spray.
- Fluid inlet with or without swivel fitting for low torque effort minimizing operator fatigue.
- Large amplitude of the fan width adjustment for time savings; no need to change the tip.
- Revised swivel conception for longer lifetime.
- Improved trigger design to ensure the operator's comfort.

Sustainability

- Increased operator safety with trigger lock and aircap protection.
- Anodized body with laser engraving not affected by exposure to solvents.
- Construction built to last and compatible with all types of materials (even water-based with stainless steel fluid passage and Rulon® sealing).
- Double seal technology to prevent aircap leakage and paint return on the air circuit.

2.2. Function of the different components

Xcite®+

Xcite®+ Light

Benchmarks	Component	Function
A	Gun	Equipment for the application materials such as paints.
B	Spraying aircap	Equipment that allows to adjust the pressure and a material flow.
C	Trigger	Mechanical device that tilts under the action of the operator on the trigger, releases the material.
D	Safety lever	Equipment to block the operating of the trigger.
E	Air inlet fitting	Equipment that allows to connect an hose in order to supply air to the gun.
F	Adjustment needle	Equipment that allows to spray the material.
G	Fluid inlet fitting	Equipment that allows to connect an hose in order to supply material to the gun.

Other tools and accessories required:

The tools listed below are recommended for installation and maintenance of the equipment:

- Pin driver,
- Flathead screwdriver,
- Hex key (4 mm),
- Flat wrench (5.5 mm),
- Fine brush.

5.1.1. Operating instructions

ATTENTION: Before any intervention, respect the health and safety instructions see § 1 page 6.

- Prepare the paint well filtered, correct viscosity.
- Consult the product data sheet.
- Connect the pump's air equipment to the compressed air network (clean and dry air, maximum air pressure = 6 bar / 87 psi).
- Connect the gun to the pump.
- Prime the paint pump.
- Take off the safety system to release the gun trigger.
- Point the gun at the pit of the booth.
- Trigger the gun until the paint comes out.
- Lock the safety system to secure the trigger.
- Select a tip on the tip chart.
- Make sure the inside of the tip has a tightness seal or a micro-screen.
- Install the tip inside the aircap making sure that the pins fit perfectly into the notches.
- Screw the tip-aircap assembly onto the gun.
Position the assembly to obtain a vertical or horizontal spray, before tightening strongly. The spray is horizontal when both ears of the aircap are horizontal.
- Unlock the safety system.
- Trigger the gun.
- Increase fluid pressure until the paint spray is well broken up.
Stop when the spray no longer improves.
- Adjust the spraying air pressure until the horns disappear.
- Put the gun on its adapted support.
- Clean with a brush and solvent if the head is slightly covered with paint.
- Do not use paint that will frequently clog the tip. Use well-filtered paints.
- Use clean and dry air.

5.2. Installation

Note: The equipments are tested in air and water to check the correct operation and the tightness of all components.

A - Zone 1 (Z1) or zone 2 (Z2) explosive zone: spray booth

B - Non-explosive zone

The 1 m / 39.37" distance indicated in this diagram is given as for information purposes only and hold harmless to Sames.

The exact delimitation of the zones is the express responsibility of the user, depending on the materials used, the environment and the conditions of use.

The 1 m / 39.37" distance can be modified if the analysis conducted by the user requires it.

By means of an antistatic hose, connect the gun to an air regulator capable of supplying at least 2 bar / 29 psi and a maximum of 6 bar / 87 psi.

5.2.1. Installation diagram

Benchmarks	Description
1	Airmix [®] pump
2	Airmix [®] Xcite [®] + gun
3	Airmix [®] fluid hose
4	Conductive air hose
5	Air regulator (= spraying air)
6	Air regulator (= fluid pressure)
7	Airmix [®] fluid filter

5.3. Shutdown and start-up procedures

5.3.1. Handling

Always hold the gun perpendicular to the surface to be painted.

Avoid working only with the wrist. Do not forget that cross passes do not make up for irregularities.

Spraying with the gun stopped gives a local overload. Therefore, never pull the trigger before starting the arm movement and always release it before stopping the movement.

Take care to obtain a suitable and regular coverage of the different passes.

5.3.2. Shutdown procedure of the gun

ATTENTION: Before any intervention, respect the health and safety instructions see § 1 page 6.

- Turn off the general air supply to the gun.
- Clean the gun.
- Turn off the fluid supply to the gun.
- Replace the paint with solvent.
- Relieve pressure on hoses by triggering the gun to flush pump, hose and gun.
- Disconnect the gun.
- Unscrew the gun aircap, soak it in the solvent and brush it.
- Unscrew the tip.
- Remove the needle.
- Soak the tip.
- Brush the tip.
- Clean the inside of the gun with the solvent soaked brush.
- Clean the threads of the screwed parts.
- Put the gun away.

6. Maintenance

Preventive maintenance is an inherent part of production and ensures the reliability of the installation. As a reminder, the performance of equipment can only be guaranteed if a minimum of control and cleaning operations are performed on this equipment.

Soiling and wear of the equipment depends on the operating and application conditions as well as the production rates.

Required qualification levels - interventions described

As the gun is easy to disassemble, this type of intervention can be carried out by a qualified technician, of average qualification, on the spot, with portable tools (wrench, screwdriver,...) defined by the maintenance instructions and the disassembly/reassembly procedures.

Wear personal protective equipment (PPE).

6.1. Maintenance summary table

The frequency of maintenance indicated in the procedures below is only indicative. The user will have to create his own range of maintenance as he uses the **Sames** equipment.

Procedure	Detail	Duration	Frequency	
Replacement				
Maintenance of the aircap (2) and of the tip (3)				
A	A1	Disassembly of the aircap (2) and of the tip (3)	15 s	Daily
	A2	Re-assembly of the aircap (2) and of the tip (3)	15 s	Daily
Maintenance of the seat-holder assembly (4)				
B	B1	Disassembly of the seat-holder assembly (4)	1 min 30 s	Weekly
	B2	Re-assembly of the seat-holder assembly (4)	1 min 15 s	Weekly
Maintenance of the needle assembly (7) and of the air valve (10)				
C	C1	Disassembly of the needle assembly (7) and of the valve (10)	1 min 50 s	Semestre
	C2	Re-assembly of the needle assembly (7) and of the valve (10)	1 min 50 s	Semestre
Maintenance of the fan adjustment valve (15)				
D	D1	Disassembly of the fan adjustment valve (15)	15 s	Semestre
	D2	Re-assembly of the fan adjustment valve (15)	15 s	Semestre
Maintenance of the trigger (5)				
E	E1	Disassembly of the trigger (5)	30 s	Annual
	E2	Re-assembly of the trigger (5)	30 s	Annual
Maintenance of the safety lever (5.5)				
F	F1	Disassembly of the safety lever (5.5)	15 s	Annual
	F2	Re-assembly of the safety lever (5.5)	15 s	Annual
Maintenance of the fluid tube assembly (21) (for Xcite®+)				
G	G1	Disassembly of the fluid tube assembly (21)	1 min 50 s	Semestre
	G2	Re-assembly of the fluid tube assembly (21)	1 min 50 s	Semestre
Maintenance of the fitting (16) (for Xcite®+ Light)				
H	H1	Disassembly of the fitting (16)	20 s	Semestre
	H2	Re-assembly of the fitting (16)	20 s	Semestre

(*)

Data for an average use of 8 hours per day.

The values are given for use without leakage or poor condition of the parts.

Adapt the frequency of maintenance according to the use.

6.2. Preventive maintenance plan – PMP 582221110

[see § 10.1 page 61](#)

The proposed preventive maintenance plan aims to define in an exhaustive way, the actions of checking, replacement and cleaning of the installed **Sames** equipment.

In order to anticipate breakdowns and malfunctions that may be due to technical deviations of the installation, the preventive maintenance plan annexed to the user's manual recalls the routine maintenance operations necessary for a better comfort in the use of the production tool.

Depending on the skills, area of responsibility and clearance of each person involved, the preventive maintenance plan can be divided into two distinct levels: level 1 and level 2:

- **Level 1:** first level maintenance is essentially composed of visual control and cleaning operations of some elements of the equipment. To limit this level, only the specific tools provided with the equipment will be used. This first level of maintenance is generally taken care of by paint operators or installation managers.
- **Level 2:** the second level maintenance completes the first level by more complex disassembly operations requiring electrical engineering tools. This second level is generally handled by the factory maintenance department.

6.3. Maintenance

ATTENTION: Before any intervention, respect the health and safety instructions see § 1 page 6.

Please refer to the Preventive Maintenance Plan see § 10.1 page 61 for more information.

6.3.1. Maintenance and monitoring periods

It is recommended to schedule a routine maintenance after a set number of hours of operation.

This is defined by the user's maintenance department and is based on the product, the work rate and the usual pressure.

The maintenance consists of replacing parts with cuts or wear and cleaning organs with compatible products without using abrasive materials that could damage them.

The O-rings are mounted with special 'pneumatic' grease. Make sure that none of them get damaged; cutting one of them may cause the gun to malfunction.

Be familiar with disassembly/reassembly procedures and spare parts.

6.3.2. Cleaning

It is recommended to clean the gun with compatible products without using abrasive materials that could damage it.

**ATTENTION: Never wipe the end of the tip with the fingers.
Always use the safety trigger lock when leaving the gun unattended.
Danger to personnel - Risk of product injection.**

6.4. Replacement

ATTENTION: Before any intervention, carry out a pressure relief procedure see § 5.3.2 page 27 and follow the health and safety instructions see § 1 page 6.

6.4.1. Procedure A1: Disassembly of the aircap (2) and of the tip (3)

- **Step 1:**
Unscrew the aircap ring (2.2) from the gun body (1).

- **Step 2:**
Remove the tip (3) from the aircap (2).
- **Step 3:**
Clean and/or change the parts.

6.4.2. Procedure A2: Reassembly of the aircap (2) and of the tip (3)

- **Step 1:**
Install the tip (3) on the aircap (2).
- **Step 2:**
Tighten the aircap ring (2.2) on the gun body (1).

6.4.3. Procedure B1: Disassembly of the seat-holder assembly (4)

- **Step 1:**
Remove the aircap (2) from the gun body (1).

If the springs (7.1 & 10.1) are not removed, go to step 2, otherwise go to step 3.

- **Step 2:**
Press the trigger (5) to move the needle (7) back from the seat (4.7.2).
- **Step 3:**
Unscrew the seat-holder assembly (4) by means of the wrench supplied with the gun.
- **Step 4:**
Release the trigger (5).
- **Step 5:**
Check the condition of the parts and the seals (4.2, 4.3 and 4.4).
Change them if necessary.

To change the seal, apply grease (PTFE) on the starter seal tool
Install the seal (4.4) on the starter seal tool.
Insert the seal (4.4) on the seat holder (4.1) by means of the seal installation tool.
NOTA: Starter seal tool and seal installation tool supplied in the kit part number 129 729 922.

- **Step 6:**
Unscrew the cartridge stop (6).
- **Step 7:**
Loosen the screw (4.5) with a screwdriver.

Be careful not to lose the diffusor (4.6) during disassembly

- **Step 8:**
Check the condition of the seat (4.7.2), of the seal (4.7.1) and of the diffusor (4.6 / 4.7.3).

6.4.4. Procedure B2: Reassembly of the seat-holder assembly (4)

For reassembly, present the parts vertically.

- **Step 1:**
Reinstall the diffuser (4.6), the seal (4.7.1) and the seat (4.7.2).
- **Step 2:**
Screw in the screw (4.5).
Tightening torque: 2 Nm / 1.47 ft-lb.
- **Step 3:**
Screw in the cartridge stop (6) until it stops.

If the cartridge stop (6) and the diffuser (4.6) are not used, the circlip (7.2) must be used instead of the cartridge stop (6) and the seal (8) instead of the diffuser (4.6) and the seal (4.7.1).

Kit part number 129 732 080.

- **Step 4:**
Apply grease (PTFE) to the seat-holder assembly (4). threads.

If the springs (7.1 & 10.1) are not removed, go to step 5, otherwise go to step 6.

- **Step 5:**
Press the trigger (5) to move the needle (7) back.
- **Step 6:**
Tighten the seat holder assembly (4) in the gun.
Tightening torque: 24 Nm / 17.7 ft-lb.
- **Step 7:**
Release the trigger (5).
- **Step 8:**
Screw the aircap (2) on the gun body (1).

6.4.5. Procedure C1: Disassembly of the needle assembly (7) and of the air valve (10)

- **Step 1:**
Unscrew the needle stop sleeve (11) by means of the wrench.
- **Step 2:**
Remove the springs (7.1 & 10.1), the needle carrier (12) and the needle rod (13).
- **Step 3:**
Press the trigger (5).
- **Step 4:**
Remove the air valve (10).

- **Step 5:**
Remove the screw (5.1) by means of a 5.5 mm wrench.
Remove the trigger spindle (5.2).
- **Step 6:**
Remove the trigger (5.3).

- **Step 7:**
Remove the seat-holder assembly (4).
- **Step 8:**
Pull the needle assembly (7) toward the front of the gun with a pin punch.

If necessary, change the seal (7.3) or the complete needle assembly (7).

6.4.6. Procedure C2: Reassembly of the needle assembly (7) and the air valve (10)

If necessary, change the seal (7.3) or the complete needle assembly (7).

- **Step 1:**
Lubricate (PTFE) the seal (7.3).
- **Step 2:**
Insert the new needle assembly (7) from the front.
- **Step 3:**
When mounting the seat-holder assembly (4), the needle assembly (7) must come to a stop.
- **Step 4:**
Grease (PTFE) springs (7.1 & 10.1), the needle rod (13), the air valve (10) and the needle stop thread (11).
- **Step 5:**
Install the air valve (10), the needle rod (13), the needle carrier (12) and the springs (7.1 & 10.1).
- **Step 6:**
Screw the needle stop thread (11).
Tightening torque: 10 Nm / 7.37 ft-lb.
- **Step 7:**
Apply glue (Loctite 222) on the screw thread (5.1).
Replace the trigger (5.3) and the trigger spindle (5.2).
- **Step 8:**
Tighten the screw (5.1).

6.4.7. Procedure D1: Disassembly of the fan adjustment valve (15)

Before each installation or disassembly of the fan adjustment valve (15) in the gun, check that it is in the open position.

- **Step 1:**
Unscrew the fan adjustment valve (15) by means of the wrench supplied with the gun.

6.4.8. Procedure D2: Reassembly of the fan adjustment valve (15)

- **Step 1:**
Screw the new fan adjustment valve (15) by means of the wrench.
Tightening torque: 10 Nm / 7.37 ft-lb.

6.4.9. Procedure E1: Disassembly of the trigger (5)

- **Step 1:**
Loosen the screw (5.1) by means of a 5.5 mm wrench.
- **Step 2:**
Remove the trigger spindle (5.2).
- **Step 3:**
Remove the trigger (5.3).

6.4.10. Procedure E2: Reassembly of the trigger (5)

- **Step 1:**
Apply glue (Loctite 222) to the screw thread (5.1).
- **Step 2:**
Place the trigger (5.3) and the trigger spindle (5.2).
- **Step 3:**
Tighten the screw (5.1).

6.4.11. Procedure F1: Disassembly of the safety lever (5.5)

- **Step 1:**
Remove the pin (5.4) with a pin driver.
- **Step 2:**
Remove the safety lever (5.5) from the gun body (1).

6.4.12. Procedure F2: Reassembly of the safety lever (5.5)

- **Step 1:**
Place the safety lever (5.5) in the gun body (1).
- **Step 2:**
Insert the pin (5.4).

6.4.13. Procedure G1: Disassembly of the protective tube assembly (21) (for Xcite® + guns)

- **Step 1:**
Unscrew the nut (20.1) by means of the wrench supplied with the gun.
- **Step 2:**
Remove the screen support (21.1) and the screen (21.2).
- **Step 3:**
Remove the seal (21.3).

- **Step 4:**
Unscrew the fitting (14).
- **Step 5:**
Loosen the screw (21.4) with a 4 mm hex key.

- **Step 6:**
Unscrew the fluid tube (21.5).
- **Step 7:**
Check the condition of the parts as well as the seal (21.3).
Change them if necessary.

6.4.14. Procedure G2: Reassembly of the protective tube assembly (21) (for Xcite[®] + guns)

- **Step 1:**
Screw the fluid tube (21.5).
- **Step 2:**
Apply glue (Loctite 222) to the thread of the screw (21.4).
Screw it onto the body (1) of the gun.
- **Step 3:**
Apply glue (Loctite 222) to the thread of the fitting (14).
- **Step 4:**
Tighten the fitting (14) in the gun body (1).
Tightening torque: 10 Nm / 7.37 ft-lb.
- **Step 5:**
Insert the screen (21.2) onto the screen support (21.1).
- **Step 6:**
Place the seal (21.3).
Insert the screen support (21.1) into the protective tube (21.5).
- **Step 7:**
Tighten the nut (20.1) by means of the wrench supplied
with the gun.

6.4.15. Procedure H1: Disassembly of the fitting (16) (for Xcite[®]+ Light guns)

- **Step 1:**
Unscrew the fitting (16).
- **Step 2:**
Remove the seal (17).
Check it and change it if necessary.

6.4.16. Procedure H2: Reassembly of the fitting (16) (for Xcite[®]+ Light guns)

- **Step 1:**
Place the seal (17).
- **Step 2:**
Screw the fitting (16).

7. Troubleshooting

ATTENTION: Before any intervention, carry out a pressure relief procedure see § 5.3.2 page 27 and follow the health and safety instructions see § 1 page 6.

- Turn off the air supply and decompress the fluid system by opening the gun.

Defaults	Possible causes	Remedies
The paint does not come out from the gun anymore	Tip and/or micro-screen partially or completely blocked.	Turn off the pressure on the pump. Depressurize the hoses correctly. Remove and clean the tip and the aircap with solvent using a brush and/or a draining needle. Check the condition of the seal and/or the micro-screen.
Deformed spray	Tip partially blocked. Air holes in the aircap partially blocked.	
Spray narrows at pump inversions	Clogged spray air inlet. Viscosity too high.	Blow with compressed air. Dilute the paint.
The aircap gets dirty frequently	Too much air.	Reduce the air pressure.
The paint comes out of the air holes of the aircap	Defective seal tip and/or micro-screen.	Replace it.
	Aircap not tight enough.	Tighten it.
Paint leakage at the needle cartridge	Worn needle cartridge.	Change the needle assembly.
Paint leakage at the front of the gun, trigger released	Badly closed needle, impurities in the paint.	Pull the trigger 3 or 4 times and let it return on its own.
	Worn out needle or/and worn out tip.	Change the needle assembly or/and the tip.
Air leakage from the valve	Worn valve.	Change the valve.
Permanent air leakage at the gun aircap when the trigger is released	Friction on the needle.	Remove the trigger and check that the needle slides freely.
	Worn valve.	Change the valve.
Important fog	Too much air.	Reduce the air pressure.

8. Spare parts List

The spare parts are classified into 2 distinct categories:

- **The 1st emergency parts:**

The 1st emergency parts are strategic elements which are not necessarily consumables but which in case of failure prohibit the operation of the machine.

Depending on the commitment of the painting line and the production rates imposed, the 1st emergency parts are not necessarily kept available in the customer's stock.

Indeed, if an interruption of the production flow is possible, storage is not necessary.

However, if a stop is not possible, the 1st emergency parts will be kept in stock.

- **Wear parts:**

Wear parts are consumable items such as O-rings that undergo regular degradation over time during normal operation of the installation. It is therefore advisable to replace them according to a defined frequency and adapted to the operating time of the installation.

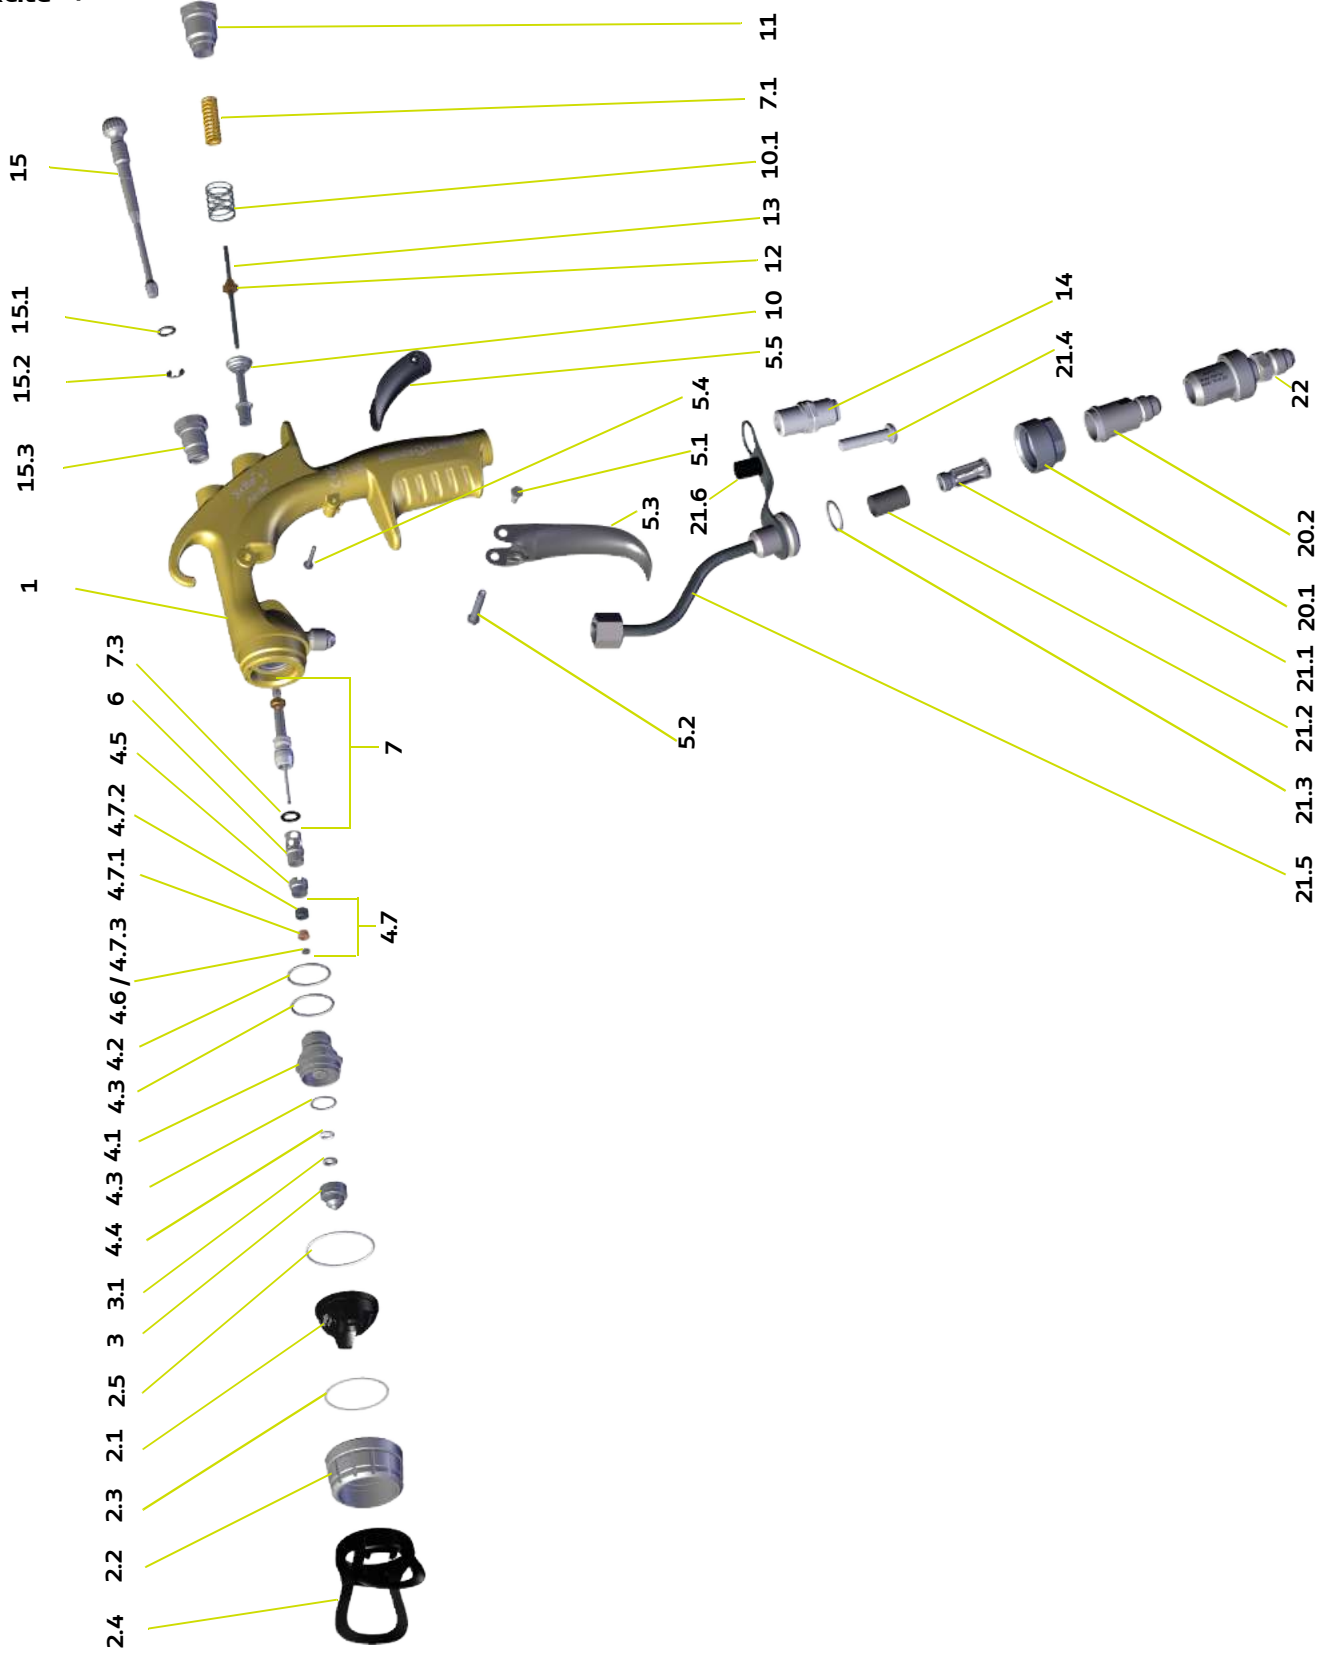

The wearing parts must therefore be kept in the customer's stock.

In order to ensure optimum assembly, spare parts should be stored at a temperature close to their operating temperature. If not, a sufficient waiting time must be observed before installation, so that all parts are assembled at the same temperature.

For almost a century, **Sames** has provided services and equipment for the application of liquid and powder paints, adhesives and sealants to bond, protect and beautify all types of surfaces.

We design, produce and market complete solutions - manual guns, automatic and robotic applicators, pumps and dosing machines...

We offer solutions at the cutting edge of technological innovation, serving industrial efficiency for the most challenging customers, and environmentally friendly.

Sames bonds, protects and beautifies all materials.

More than a supplier, **Sames** is the partner of your performance.

We *Simply Apply the Most Efficient Solutions.*

Enjoy being the best *together*
